

Planning and Quality Assurance Affairs

Form (A)

Course Specifications

General Information

Course name	Algorithms
Course number	ITCS2312
Faculty	
Department	
Course type	Major Needs
Course level	2
Credit hours (theoretical)	3
Credit hours (practical)	0
Course Prerequisites	

Course Objectives

- 1 - Learning the main classic algorithms in various domains
- 2 - Learning techniques for designing efficient algorithms
- 3 - Applying the algorithms and design techniques to solve problems
- 4 - Having a sense of the complexities of various problems in different domains.

## Intended Learning Outcomes

<b>Knowledge and Understanding</b>	<ul style="list-style-type: none"><li>* a1. Explain asymptotic notation of time analysis and complexity</li><li>* a2. Discuss a variety of useful algorithms</li><li>* a3. Identify the principles and techniques for algorithm design</li><li>* a4. Define the essential mathematics relevant to algorithms</li><li>* a5. Outline a core of analysis and applied mathematics</li></ul>
<b>Intellectual Skills</b>	<ul style="list-style-type: none"><li>* b1. Prove the correctness of simple algorithms</li><li>* b2. Perform comparisons between (algorithms, methods, techniques, etc.)</li><li>* b3. Perform classifications of (methods, techniques, algorithms, etc.)</li><li>* b4. Identify components, patterns and main ideas of algorithm designs</li></ul>
<b>Professional Skills</b>	<ul style="list-style-type: none"><li>* c1. Use the divide-and-conquer, greedy, and dynamic programming paradigms to design algorithms</li><li>* c2. Evaluate algorithms in terms of their time analysis within the given problem</li><li>* c3. Specify and apply the main methodologies for designing algorithms</li><li>* c4. Evaluate systems in terms of general quality attributes and possible tradeoffs presented within the given problem</li><li>* c5. Deploy effectively the tools used for designing and analyzing the algorithms</li><li>* c6. Specify, investigate, analyze, design and develop computer-based systems using appropriate tools and techniques</li><li>* c7. Apply tools and techniques for the design and development of applications</li></ul>
<b>General Skill</b>	<ul style="list-style-type: none"><li>* d1. Manage tasks effectively</li><li>* d2. Manage ones own learning and development, including time management</li><li>* d3. Search for information and adopt life-long self-learning</li><li>* d4. Communicate effectively by oral, written and visual means</li><li>* d5. Work effectively as an individual and as a member of a team</li><li>* d6. Develop strong problem-solving and decision-making skills, and will be able to apply those skills effectively in all aspects of their future lives</li></ul>

## Course Contents

1 - Notion of an algorithm: big-oh, theta and omega notations. Space and time complexities of an algorithm
2 - Fundamental design paradigms: Sorting and searching, divide and conquer, AVL-tree, Spanning Tree, B-Tree, B*-tree, dynamic programming, greedy methods
3 - Illustrative examples: graph theory, computational geometry, optimization, numerical analysis and data processing

## Teaching and Learning Methods

1 - Lectures
2 - Tutorial Exercises
3 - Projects

## Students Assessment

<b>Assessment Method</b>	<b>TIME</b>	<b>MARKS</b>
Mid-Term Exam I	6th week	20
Project	12th week	20
Class Work	During the 16 weeks	10
Final Exam	16th week	50

---

## Books and References

Essential books	Thomas A. Standish, Data Structure in Java , Addison Wesley, 1998 Iain T. Adamson, Data Structure And Algorithms ,A First Course , Springer , 1996

## Knowledge and Skills Matrix

Main Course Contents	Study Week	Knowledge and Understanding	Intellectual Skills	Professional Skills	General Skill
Notion of an algorithm: big-oh, theta and omega notations. Space and time complexities of an algorithm	1-3	a1, a4, a5	b1, b4	c2, c4-c6	d1-d5
Fundamental design paradigms: Sorting and searching, divide and conquer, AVL-tree, Spanning Tree, B-Tree ,B*-tree, dynamic programming, greedy methods	4-10	a2, a3, a5	b2-b4	c1, c3, c5, c6	d1-d6
Illustrative examples: graph theory, computational geometry, optimization, numerical analysis and data processing	11-15	a2, a3, a5	b2-b4	c3, c5-c7	d1-d6
